

EVA - the Electronic Virtual Assistant

EVA is digital signage in a perfect combination of design and function: The attractive light pillar is a true eye catcher and ideal as an electronic receptionist, a service terminal or as a visitor guide as well as an information desk at exhibitions.

EVA arouses your attention, is well-informed and your helper for 24 hours – the Electronic Virtual Assistant by Kindermann. Equipped with a 32" monitor with touch panel and a stereo sound system with integrated microphone, EVA is activated by its motion sensor as soon as a visitor is approaching. Due to its user-friendly menu, visitors will quickly get the information they wish. Should there be any questions open, which cannot be answered directly. EVA will provide a telephone line via its integrated VoIP client. For this function no additional telephone interface is required, mains supply and a network connection will do. Thus EVA is easy to install and the supplied software, which is based on Windows and developed by Kindermann, can be individually adapted to the user's needs.

One of the typical functions of EVA is the reception of visitors. EVA can provide a list of contact persons in the company with their telephone numbers, give information about the company and show you floor plans of the building. Moreover, EVA is also a service point, e.g. it works as a hotel guide, calls your taxi, and presents you an event schedule, or it is an information desk at exhibitions. Even disabled people can easily operate the system.

EVA will make its debut at the Integrated Systems Europe in Amsterdam from 2 – 4 February 2010. There ten Electronic Virtual Assistants will inform the visitors about the exhibitors and the exhibition and provide them with details about the companies and their products and with floor plans.

The Kindermann profile

Kindermann, an innovative expert in presentation and conference technology, has an excellent reputation for high quality and user-friendly solutions.

Its comprehensive sales programme, which is one of the biggest of its branch in Europe, consists of a wide range of products from the single projector to the complete equipment of conference rooms. A big percentage of all these products is developed and produced by Kindermann.

The sales programme is divided up into three sectors: "presentation", "installation" and "conferencing".

The sector "presentation" stands for projectors and flat screen displays.

The sector "installation" comprises all system and installation components as well as digital signage.

In the sector "conferencing" Kindermann offers solutions to meet sophisticated demands in the fields of conference technology and modern media. This includes audio and video conferences.

As a manufacturer and distributor, Kindermann supports its dealers by providing them with competent technical advice and individual guidance for projects – including planning a system, supplying the technology, and caring for its integration. Attractive special services round up the portfolio.
